

### Ephratah Vol. Fire Dept, St. Johnsville NY ~ Tanker / Pumper

This pumper for Ephratah, NY is built on an International 7500 Series crew cab with a 350 HP Maxxforce diesel engine and Allison 3000EVS transmission. The apparatus is equipped with a WS Darley LDM 1250GPM midship single stage pump that supplies water to multiple discharges. The water tank has a capacity of 1000-gallons and is supplied with a 2 ½” direct tank fill at the left rear body panel. The apparatus body is an all stainless steel body with Gortite aluminum roll up doors with a satin finish. The body style was a rescue style body that is equipped with multiple shelves, slide out trays and slide out tool boards for a large storage capacity within the body. Also, the ladders and hard suction hose is stored thru the water tank with access from the rear panel above the rear step compartment door. There is wheel well SCBA bottle storage located two (2) each side of the body with cast aluminum doors. The warning light package on the apparatus is an all Whelen Super LED package at all zones plus a Whelen siren and speaker package. Scene lighting is provided by six (6) Whelen 900 Super LED scene lights and two (2) Fire Research Spectra 12-volt, 20,000lumen side mount/push up lights located on each side of the pump module.
