

### **Gibbon, MN ~ Walk-In Rescue**

This rescue is built on a Ford F550 chassis with diesel engine and automatic transmission. The apparatus body is an all aluminum 16' walk-in rescue body. The exterior compartments are equipped with Gortite aluminum roll up doors. The interior of the apparatus body is equipped with cabinets at each side utilizing as much open space as possible. The interior cabinets are equipped with Diamond "Clearvision" roll up doors to allow personnel to view the inside of the cabinets without opening the doors. At the right side interior there is seating for three (3) with SCBA backrest and bottle clips. There is storage under the bench seating for backboards stored on edge and other loose equipment items. The interior is equipped with a HVAC system plumbed off of the chassis for climate control purposes. The warning lighting is all Code 3 with a halogen light-bar and LED flashers. There is a Honda gasoline powered generator supplied on the apparatus with four (4) Fire Research telescoping 750-watt scene lights.
