

Peshtigo, WI ~ Pumper

This pumper for Peshtigo, WI is built on a Freightliner M2-106 4-door cab and chassis with a Cummins diesel engine. The pump is a Waterous CSU 1500GPM pump equipped with a Waterous Advantus 6 foam injection system. The pump module is a top mount module with the speedlays located at the front of the pump module on removable trays. The body is an all aluminum structure with aluminum ROM roll up doors and ROM LED compartment lighting. The water tank is a UPF 750 gallon water tank with a 20 gallon foam cell. The ladders and suction hose are stored on an overhead hydraulic ladder rack at the right side of the apparatus body. Mounted above the pump in the dunnage area there is two (2) Hannay electric cable reels with Akron junction boxes. There is a small refrigerator installed at the lower right front compartment of the body wired to the shoreline inlet and generator. The warning light package is an all Whelen Super LED package. The apparatus is also equipped with a Onan CMHG 10kw hydraulic generator and two (2) Akron 1500-watt/240-volt telescoping scene lights at the rear of the cab and two (2) Akron 500-watt/120-volt telescoping tripod lights at the rear.
