

Salt River Fire Dept, Salt River AZ ~ Pumper-Tanker

This pumper-tanker is built on a Spartan Gladiator LFD 10" Raised Roof cab and chassis with the Evolution appearance package. The engine is a Cummins 500hp diesel with an automatic transmission. The body is an all aluminum structure with Gortite aluminum roll up doors. All of the body compartments are equipped with PAC-TRAC storage systems and multiple adjustable shelves, slide out trays and swing out tool boards. There is a Ziamatic folding tank bin at the right side, rear slide in ladder storage at the right rear and hard suction hose storage each side. The water pump is a Waterous CSU 2000GPM pump with a FoamPro 2002 foam injection system and FoamPro PowerFill foam fill system. The pump is plumbed to multiple discharges each side, front and rear of the apparatus. The water tank is a 3000-gallon water and 50-gallon Class A foam tank fabricated by United Plastics Fabricating. The tank is also equipped with three (3) Newton electric dump valves and telechutes with dual controls, rear panel and cab. The apparatus is equipped with an all Whelen Super LED warning light package with a combination Whelen Pioneer scene lighting and Fire Research Optimum 12-volt HID scene lighting package. A Universal Life Safety Systems Backstop is equipped at the rear bumper for added safety while backing up the apparatus.
